EL NIÑO
ACTIVITY/MONITORING REPORT 01-2026

October 26, 2026 – 5:00 PM

I. BACKGROUND INFORMATION

Recent atmospheric and oceanic indicators show that a strong to very strong El Niño is present in the Tropical Pacific. Forecasts predict that El Niño will continue until the first half of 2027 and may reach its peak before the end of 2026.

Based on observed rainfall during the past months and the forecast for October, meteorological drought/dry spells are likely to be experienced by the end of the month in most parts of Bicol Region. Near-average to warmer-than-average mean air temperatures are expected over most parts of the country. The ranges of forecast temperature are as follows: 13.1°C – 26.7°C in the mountainous areas of Luzon, 17.0°C – 37.2°C over the rest of Luzon. Meanwhile, all government agencies and the general public are strongly advised to take appropriate preparedness and response measures to mitigate the impacts of El Niño, particularly in areas vulnerable to dry spells and warmer temperatures.
